

Regional Groupings in Library Holdings Display

When you display default holdings for WorldCat records while cataloging in the Connexion client or browser or in Z39.50, if more than 20 libraries hold the item and fewer than 10 of them are in your location, but 10 or more are in your region, the system shows which region(s) have holdings. Regional groupings display as lists of codes for [states](#), [provinces](#), and [other regions/countries](#), as shown below.
