

Preeminent research tool for architecture and related studies

The Avery Index to Architectural Periodicals

The Avery Index to Architectural Periodicals has been lauded as the single most important bibliographic research tool available worldwide for research in architecture, urban design, historic preservation and urban planning history. Produced by The Getty Research Institute, with editorial offices at Columbia University, the database surveys 2,500 international journals, most of which are not indexed elsewhere, and offers nearly 600,000 citations dating to the mid-18th century.

Key features

An easy-to-use interface: The OCLC® FirstSearch® interface accommodates searchers of all skill levels—basic, advanced and expert. The interface is available in many languages (English, French, Spanish, Japanese, Korean, and traditional and simplified Chinese), and it displays the accents and diacritics in non-English records.

Powerful search capabilities: Use field-specific indexing for word and exact-phrase searching, and browse nearly 30 database indexes. Users can also limit their searches by year and other standard search limits.

Links to full-text content: The Avery Index provides links to Electronic Collections Online™, Wilson Select Plus and other FirstSearch full-text databases when access has been purchased and enabled. Library staff may also enable linking from FirstSearch citations to other full-text resources when they enable linking to a local OpenURL server.

Links to library holdings in WorldCat: Avery Index users need to know where to find the resources their searching uncovers, and OCLC's WorldCat® database helps them in several ways. They can view a list of libraries (or library groups) in your region or state that own specific items. They can view or search your library's OPAC to access local holdings information. And they can view detailed holdings information in the OCLC Local Holdings Maintenance service.

Key advantages

Outstanding depth: The Avery Index surveys both scholarly and popular literature: publications of professional associations, U.S. state and regional periodicals, and major serials that cover architecture and design in Europe, Asia, Latin America and Australia. It includes the 10-volume *Burnham Index to Architectural Literature* from the Art Institute of Chicago, providing unsurpassed access to periodicals from the Midwestern U.S.

Essential for serious research: The Avery Index is recognized as the most valuable bibliographic research tool available worldwide for studies in architecture, urban design, historic preservation and urban planning history. The database is updated weekly, keeping it current for research and scholarship.

Biographical information: The Avery Index also includes nearly 13,000 citations for architects' obituaries—an excellent source of biographical information—and often the only one for less-published architects.
