

Relocations and Discontinuations

The following two lists show all the relocations and discontinuations since Edition 13.

The column headed *Edition 13* indicates in numerical order each number in that edition from which a topic or group of topics has been shifted; the column headed *Edition 14* indicates each corresponding number in the present edition to which those topics or groups of topics have been shifted. If two or more topics have been shifted from one number to two or more numbers, each separate shift is shown.

Numbers in the *Edition 13* column enclosed in square brackets are no longer in use; those not enclosed in brackets have lost part of their meaning through relocation or discontinuation, but still retain some of their meaning.

In the following lists, the same abbreviations employed in the Relative Index are used for Tables 1–4, e.g., T1 means Table 1 Standard Subdivisions.

Relocations

In a relocation, one or more topics are shifted to a number differing from the old in respects other than length. If the relocation is partial, the original number remains valid; but if it is total, the original number is no longer used. Relocations are described and explained in the Introduction.

Relocations that have previously appeared in an interim update prior to the publication of Edition 14 are indicated by * next to the Edition 13 number. Relocations that eliminate dual provision for the same topic or topics are indicated by † next to the Edition 13 number.

For example, one of the topics that was in 005.3 in Edition 13 has been relocated to 005.5 in Edition 14; all of the topics in 005.6 have been relocated to 005.1. Some of the topics in 023 have been relocated to 020.71 to eliminate dual provision.

“Scattered within 616–618” means that the topic has been relocated to so many numbers throughout 616–618 that it is not feasible to name them all.

An indented number is an element of an add table. The number or span under which it is indented shows the location of the add table. For example, the [08] under 306.2–.6 indicates that the [08] is an element of the add table at 306.2–.6.

For details of the specific relocated topics the classifier should consult the appropriate entries in the tables and schedules.

Discontinuations

A discontinuation is the result of shifting one or more topics to a number shorter than the previous one but otherwise not differing from it. If all topics in a given number are thus shifted, the number is no longer valid. Discontinuations are described and explained in the Introduction.

For example, 005.369 has been discontinued and all of its contents moved up to the broader number 005.36, while only some of the topics in 526.022 have been moved up to 526.

For details of the specific relocated topics the classifier should consult the appropriate entries in the tables and schedules.
