About the Introduction

1.1 This Introduction explains the basic principles and structure of the Dewey Decimal Classification (DDC) system.

1.2 The Introduction is intended to be used in conjunction with the Glossary and the Manual. The Glossary defines terms used in the Introduction and elsewhere in the Classification. The Manual offers advice on classifying in difficult areas, and explains how to choose between related numbers.

Classification: What It Is and What It Does

2.1 Classification provides a system for organizing knowledge. Classification may be used to organize knowledge represented in any form, e.g., books, documents, electronic resources.

2.2 Notation is the system of symbols used to represent the classes in a classification system. In the Dewey Decimal Classification, the notation is expressed in Arabic numerals. The notation gives both the unique meaning of the class and its relation to other classes. The notation provides a universal language to identify the class and related classes, regardless of the fact that different words or languages may be used to describe the class.

History, Current Use, and Development of the Dewey Decimal Classification

3.1 The Dewey Decimal Classification is a general knowledge organization tool that is continuously revised to keep pace with knowledge. The system was conceived by Melvil Dewey in 1873 and first published in 1876. The DDC is published in print and electronic versions by OCLC Online Computer Library Center, Inc. OCLC owns all copyright rights in the Dewey Decimal Classification, and licenses the system for a variety of uses.

3.2 The DDC is the most widely used classification system in the world. Libraries in more than 135 countries use the DDC to organize and provide access to their collections, and DDC numbers are featured in the national bibliographies of more than sixty countries. Libraries of every type apply Dewey numbers on a daily basis and share these numbers through a variety of means (including WorldCat, the OCLC Online Union Catalog). Dewey is also used for other purposes, e.g., as a browsing mechanism for resources on the web.

3.3 The DDC has been translated into over thirty languages. Translations of recent full and abridged editions of the DDC are completed or underway in Arabic, Chinese, French, German, Greek, Hebrew, Icelandic, Italian, Korean, Norwegian, Russian, Spanish, and
3.4 One of Dewey's great strengths is that the system is developed and maintained in a national bibliographic agency, the Library of Congress. The Dewey editorial office is located in the Decimal Classification Division of the Library of Congress, where annually the classification specialists assign over 110,000 DDC numbers to records for works cataloged by the Library. Having the editorial office within the Decimal Classification Division enables the editors to detect trends in the literature that must be incorporated into the Classification. The editors prepare proposed schedule revisions and expansions, and forward the proposals to the Decimal Classification Editorial Policy Committee (EPC) for review and recommended action.

3.5 EPC is a ten-member international board whose main function is to advise the editors and OCLC on matters relating to changes, innovations, and the general development of the Classification. EPC represents the interests of DDC users; its members come from public, special, and academic libraries, and from library schools.

Overview of the Dewey Decimal Classification

Conceptual Framework

4.1 The DDC is built on sound principles that make it ideal as a general knowledge organization tool: meaningful notation in universally recognized Arabic numerals, well-defined categories, well-developed hierarchies, and a rich network of relationships among topics. In the DDC, basic classes are organized by disciplines or fields of study. At the broadest level, the DDC is divided into ten main classes, which together cover the entire world of knowledge. Each main class is further divided into ten divisions, and each division into ten sections (not all the numbers for the divisions and sections have been used).

4.2 The main structure of the DDC is presented in the DDC Summaries in the beginning of volume 2. The first summary contains the ten main classes. The second summary contains the hundred divisions. The third summary contains the thousand sections. The first and second summaries are provided for browsing purposes, and the headings do not necessarily match the name of the sections found in the schedules.
4.3  The ten main classes are:

000  Computers, information & general reference  
100  Philosophy & psychology  
200  Religion  
300  Social sciences  
400  Language  
500  Science  
600  Technology  
700  Arts & recreation  
800  Literature  
900  History & geography  

4.4  Class 000 is the most general class, and is used for works not limited to any one specific discipline,  
e.g., encyclopedias, newspapers, general periodicals. This class is also used for certain  
specialized disciplines that deal with knowledge and information,  
e.g., computer science, library and information science, journalism. Each of the other main  
classes (100 - 900) comprises a major discipline or group of related disciplines.  

4.5  Class 100 covers philosophy, paranormal phenomena, and psychology.  

4.6  Class 200 is devoted to religion. Both philosophy and religion deal with the ultimate nature of  
existence and relationships, but religion treats these topics within the context of revelation,  
deity, and worship.  

4.7  Class 300 covers the social sciences. Class 300 includes sociology, anthropology,  
statistics, political science, economics, law, public administration, social problems and  
services, education, commerce, communications, transportation, and customs.  

4.8  Class 400 comprises language, linguistics, and specific languages. Literature, which is  
arranged by language, is found in 800.  

4.9  Class 500 is devoted to the natural sciences and mathematics. The natural sciences (500)  
describe and attempt to explain the world in which we live.  

4.10  Class 600 is technology. Technology consists of utilizing the sciences to harness the  
natural world and its resources for the benefits of humankind.  

4.11  Class 700 covers the arts: art in general, fine and decorative arts, music, and the  
performing arts. Recreation, including sports and games, is also classed in 700.  

4.12  Class 800 covers literature, and includes rhetoric, prose, poetry, drama, etc. Folk  
literature is classed with customs in 300.
4.13 Class 900 is devoted to history and geography. When a work is a story of events that have transpired or an account of existing conditions in a particular place or region, it is classed in 900. A history of a specific subject is classed with the subject.

4.14 Since the parts of the DDC are arranged by discipline, not subject, a subject may appear in more than one class. For example, "clothing" has aspects that fall under several disciplines. The psychological influence of clothing belongs in 155.95 as part of the discipline of psychology; customs associated with clothing belong in 391 as part of the discipline of customs; and clothing in the sense of fashion design belongs in 746.92 as part of the discipline of the arts.

Notation

4.15 Arabic numerals are used to represent each class in the DDC. The first digit in each three-digit number represents the main class. For example, 500 represents science. The second digit in each three-digit number indicates the division. For example, 500 is used for general works on the sciences, 510 for mathematics, 520 for astronomy, 530 for physics. The third digit in each three-digit number indicates the section. Thus, 530 is used for general works on physics, 531 for classical mechanics, 532 for fluid mechanics, 533 for gas mechanics. The DDC uses the convention that no number should have fewer than three digits; zeros are used to fill out numbers.

4.16 A decimal point, or dot, follows the third digit in a class number, after which division by ten continues to the specific degree of classification needed. The dot is not a decimal point in the mathematical sense, but a psychological pause to break the monotony of numerical digits and to ease the transcription and copying of the class number. A number should never end in a 0 anywhere to the right of the decimal point.

Principle of Hierarchy

4.17 *Hierarchy* in the DDC is expressed through structure and notation.

4.18 *Structural hierarchy* means that all topics (aside from the ten main classes) are part of all the broader topics above them. The corollary is also true: whatever is true of the whole is true of the parts. This important concept is called *hierarchical force*. Certain notes regarding the nature of a class hold true for all the subordinate classes, including logically subordinate topics classed at coordinate numbers. (For a discussion of notes with hierarchical force, see paragraphs 7.10 - 7.17 and 7.20 - 7.22.)

Because of the principle of hierarchical force, hierarchical notes are usually given only once—at the highest level of application. For example, the scope note at
700 applies to 730, to 736, and to 736.4. The words "Description, critical appraisal . . ." found in the scope note at 700 also govern the critical appraisal of carving in 736 Carving and carvings, and of wood carving in 736.4 Wood. In order to understand the structural hierarchy, the classifier must read up and down the schedules (and remember to turn the page).

4.19 Notational hierarchy is expressed by length of notation. Numbers at any given level are usually subordinate to a class whose notation is one digit shorter; coordinate with a class whose notation has the same number of significant digits; and superordinate to a class with numbers one or more digits longer. The underlined digits in the following example demonstrate this notational hierarchy:

```
600  Technology (Applied sciences)
630   Agriculture and related technologies
636   Animal husbandry
636.7  Dogs
636.8  Cats
```

"Dogs" and "Cats" are more specific than (i.e., are subordinate to) "Animal husbandry"; they are equally specific as (i.e., are coordinate with) each other; and "Animal husbandry" is less specific than (i.e., is superordinate to) "Dogs" and "Cats."

4.20 Sometimes, other devices must be used to express the hierarchy when it is not possible or desirable to do so through the notation. Special headings, notes, and entries indicate relationships among topics that violate notational hierarchy. A dual heading is used when a subordinate topic is the major part of the subject; the subject as a whole and the subordinate topic as a whole share the same number (e.g., 599.9 Hominidae Homo sapiens). A see reference leads the classifier to subdivisions of a subject located outside the notational hierarchy. A centered entry (so called because its numbers, heading, and notes appear in the center of the page) constitutes a major departure from notational hierarchy. A centered entry is used to indicate and relate structurally a span of numbers that together form a single concept for which there is no specific hierarchical notation available. In the DDC, centered entries are always flagged typographically by the symbol > in the number column.

Classifying with the DDC

5.1 Classifying a work with the DDC requires determination of the subject, the disciplinary focus, and, if applicable, the approach or form. (For a discussion of approach or form, see paragraph 8.3.)

Determining the Subject of a Work

5.2 Classifying a work properly depends first upon determining the subject of the work in
hand. A key element in determining the subject is the author’s intent.

(A) The title is often a clue to the subject, but should never be the sole source of analysis. For example, *Who Moved My Cheese?* is a work on coping with change, not a work related to the culinary arts. Likewise, a title with specific terms that are subdivisions of a field may in fact use such terms symbolically to represent the broader topic. For example, titles containing terms like chromosomes, DNA, double helix, genes, and genomes may use these terms symbolically to represent the whole subject of biochemical genetics.

(B) The table of contents may list the main topics discussed. Chapter headings may substitute for the absence of a table of contents. Chapter subheadings often prove useful.

(C) The preface or introduction usually states the author's purpose. If a foreword is provided, it often indicates the subject of the work and suggests the place of the work in the development of thought on the subject. The book jacket or accompanying material may include a summary of the subject content.

(D) A scan of the text itself may provide further guidance or confirm preliminary subject analysis.

(E) Bibliographical references and index entries are sources of subject information.

(F) Cataloging copy from centralized cataloging services is often helpful by providing subject headings, classification numbers, and notes. Such copy appears in online services, and on the verso of the title page of many U.S., Australian, British, and Canadian books as part of Cataloging-in-Publication (CIP) data. Data from these sources should be verified with the book in hand, since the cataloging record is based on prepublication information.

(G) Occasionally, consultation of outside sources such as reviews, reference works, and subject experts may be required to determine the subject of the work.

**Determining the Discipline of a Work**

5.3 After determining the subject, the classifier must then select the proper discipline, or field of study, of the work.

5.4 The guiding principle of the DDC is that a work is classed in the discipline for which it
is intended, rather than the discipline from which the work derives. This enables works
that are used together to be found together. For example, a general work by a zoologist
on agricultural pest control should be classed in agriculture, not zoology, along with
other works on agricultural pest control.

5.5 Once the subject has been determined, and information on the discipline has been found,
the classifier will turn to the schedules. The summaries are a good means of mental
navigation. The headings and notes in the schedules themselves and the Manual provide
much guidance. The Relative Index may help by suggesting the disciplines in which a
subject is normally treated. (For a discussion of the summaries, see paragraph 7.1; for a
discussion of the Manual, see paragraphs 10.1 - 10.6; for a discussion of the Relative
Index, see paragraphs 11.1 - 11.15.)

5.6 If the Relative Index is used, the classifier must still rely on the structure of the
Classification and various aids throughout to arrive at the proper place to classify a work.
Even the most promising Relative Index citations must be verified in the schedules; the
schedules are the only place where all the information about coverage and use of the
numbers may be found.

More Than One Subject in the Same Discipline

5.7 A work may include multiple subjects treated separately or in relation to one another
from the viewpoint of a single discipline. Use the following guidelines in determining
the best placement for the work:

(A) Class a work dealing with interrelated subjects with the subject that is being acted
upon. This is called the rule of application, and takes precedence over any other
rule. For instance, class an analytical work dealing with Shakespeare's influence
on Keats with Keats. Similarly, class a work on the influence of the Great
Depression on 20th century American art with American art.

(B) Class a work on two subjects with the subject receiving fuller treatment.

(C) If two subjects receive equal treatment, and are not used to introduce or
explain one another, class the work with the subject whose number comes first
in the DDC schedules. This is called the first-of-two rule. For example, a
history dealing equally with the United States and Japan, in which the United
States is discussed first and is given first in the title, is classed with the history
of Japan because 952 Japan precedes 973 United States.

Sometimes, specific instructions are given to use numbers that do not come first in the schedules. For example, at 598, the note "class comprehensive works on warm-blooded vertebrates in 599" tells the classifier to ignore the first-of-two rule and class a work on birds (598) and mammals (599) in 599, which is the comprehensive number for warm-blooded vertebrates.

Also disregard the first-of-two rule when the two topics are the two major subdivisions of a subject. For example, collection systems (628.142) and distribution systems (628.144) taken together constitute 628.14 Collection and distribution systems. Works covering both of these topics are classed in 628.14 (not 628.142).

(For a discussion of the first-of-two rule versus preference order, see paragraph 9.6; for a discussion of comprehensive numbers, see paragraphs 7.17 and 7.20 - 7.21.)

(D) Class a work on three or more subjects that are all subdivisions of a broader subject in the first higher number that includes them all (unless one subject is treated more fully than the others). This is called the rule of three. For example, a history of Portugal (946.9), Sweden (948.5), and Greece (949.5) is classed with the history of Europe (940).

(E) Subdivisions beginning with zero should be avoided if there is a choice between 0 and 1–9 at the same point in the hierarchy of the notation. Similarly, subdivisions beginning with 00 should be avoided when there is a choice between 00 and 0. This is called the rule of zero. For example, a biography of an American Methodist missionary in China belongs in 266 Missions. The content of the work can be expressed in three different numbers:

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>266.0092</td>
<td>biography of a missionary</td>
</tr>
<tr>
<td>266.02373051</td>
<td>foreign missions of the United States in China</td>
</tr>
<tr>
<td>266.76092</td>
<td>biography of a United Methodist Church missionary</td>
</tr>
</tbody>
</table>

The last number is used since it has no zero at the fourth position.
More Than One Discipline

5.8 Treating a subject from the point of view of more than one discipline is different from treating several subjects in one discipline. Use the following guidelines in determining the best placement for the work:

(A) Use the interdisciplinary number provided in the schedules or Relative Index if one is given. An important consideration in using such an interdisciplinary number is that the work must contain significant material on the discipline in which the interdisciplinary number is found. For example, 305.231 (a sociology number) is provided for interdisciplinary works on child development. However, if a work that is interdisciplinary with respect to child development gives little emphasis to social development and a great deal of emphasis to the psychological and physical development of the child (155.4 and 612.65, respectively), class it in 155.4 (the first number in the schedules of the next two obvious choices). In short, interdisciplinary numbers are not absolute; they are to be used only when applicable. (For a discussion of interdisciplinary numbers, see paragraphs 7.17, 7.20 - 7.21, and 11.8 - 11.9.)

(B) Class works not given an interdisciplinary number in the discipline given the fullest treatment in the work. For example, a work dealing with both the scientific and the engineering principles of electrodynamics is classed in 537.6 if the engineering aspects are introduced primarily for illustrative purposes, but in 621.31 if the basic scientific theories are only preliminary to the author's exposition of engineering principles and practices.

(C) When classifying interdisciplinary works, do not overlook the possibilities of main class 000 Computers, information & general reference, e.g., 080 for a collection of interviews of famous people from various disciplines.

Any other situation is treated in the same fashion as those found in the instructions at More Than One Subject in the Same Discipline (paragraph 5.7).
Table of Last Resort

5.9 When several numbers have been found for the work in hand, and each seems as good as the next, the following table of last resort (in order of preference) may be used as a guideline in the absence of any other rule:

Table of last resort

(1) Kinds of things
(2) Parts of things
(3) Materials from which things, kinds, or parts are made
(4) Properties of things, kinds, parts, or materials
(5) Processes within things, kinds, parts, or materials
(6) Operations upon things, kinds, parts, or materials
(7) Instrumentalities for performing such operations

For example, surveillance by border patrols could be classed in either 363.285 Border patrols, or 363.232 Patrol and surveillance. Choose 363.285 since border patrols are a kind of police service, while patrol and surveillance are processes performed by police services.

5.10 Do not apply this table or any other guideline if it appears to disregard the author's intention and emphasis.

How DDC 22 Is Arranged

6.1 DDC 22 is composed of the following major parts in four volumes:

Volume 1
(A) New Features in Edition 22: A brief explanation of the special features and changes in DDC 22
(B) Introduction: A description of the DDC and how to use it
(C) Glossary: Short definitions of terms used in the DDC
(D) Index to the Introduction and Glossary
Manual: A guide to the use of the DDC that is made up primarily of extended discussions of problem areas in the application of the DDC. Information in the Manual is arranged by the numbers in the tables and schedules. Directly following the Manual is an appendix explaining the policies of the Library of Congress Decimal Classification Division.

Tables: Six numbered tables of notation that can be added to class numbers to provide greater specificity

Lists that compare Editions 21 and 22: Relocations and Discontinuations; Reused Numbers

**Volume 2**

DDC Summaries: the top three levels of the DDC

**Volume 3**

Schedules: The organization of knowledge from 000 - 599

**Volume 4**

Schedules: The organization of knowledge from 600 - 999

Relative Index: An alphabetical list of subjects with the disciplines in which they are treated subarranged alphabetically under each entry

**Key Features of the Schedules and Tables**

**Summaries**

7.1 *Summaries* provide an overview of the structure of classes. Three types of summaries appear in the DDC:

(A) DDC Summaries, the summaries of the top three levels of the DDC, are found at the front of the schedules in volume 2. (For a discussion of DDC Summaries, see paragraphs 4.2 – 4.13.)

(B) Two-level summaries are provided for each main class and division of the
schedules and main numbers of Table 2 with subdivisions that extend beyond forty pages. See the summaries at the beginning of Table 2 — 4 Europe and 370 Education for examples of two-level summaries.

(C) Single-level summaries in the schedules and tables provide an overview of classes with subdivisions that cover between four and forty pages. For example, 382 International commerce (Foreign trade) has the following summary:

**SUMMARY**

382.01 - .09 Standard subdivisions
  .1 General topics of international commerce
  .3 Commercial policy
  .4 Specific products and services
  .5 Import trade
  .6 Export trade
  .7 Tariff policy
  .9 Trade agreements

**Entries**

7.2 Entries in the schedules and tables are composed of a DDC number in the number column (the column at the left margin), a heading describing the class that the number represents, and often one or more notes. DDC numbers are listed in groups of three digits for ease of reading and copying. All entries (numbers, headings, and notes) should be read in the context of the hierarchy. (For a discussion of the principle of hierarchy, see paragraphs 4.17 - 4.20.)

7.3 The first three digits of schedule numbers (main classes, divisions, sections) appear only once in the number column, when first used. They are repeated at the top of each page where their subdivisions continue. Subordinate numbers appear in the number column, beginning with a decimal point, with the initial three digits understood.

7.4 Table numbers are given in full in the number column of the tables, and are never used alone. There are six numbered tables in DDC 22:

| T1 | Standard Subdivisions |
Except for notation from Table 1 (which may be added to any number unless there is an instruction in the schedules or tables to the contrary), table notation may be added only as instructed in the schedules and tables. (For a detailed discussion of the use of the six tables, see paragraphs 8.3 - 8.18.)

7.5 When a subordinate topic is a major part of a number, it is sometimes given as a part of a dual heading. For example:

—72 Middle America Mexico

599.9 Hominidae Homo sapiens

7.6 Some numbers in the schedules and tables are enclosed in parentheses or square brackets. Numbers and notes in parentheses provide options to standard practice. Numbers in square brackets represent topics that have been relocated or discontinued, or are unassigned. Square brackets are also used for standard subdivision concepts that are represented in another location. Bracketed numbers should never be used. (For a discussion of options, see paragraphs 12.1 - 12.7; for a discussion of relocations and discontinuations, see paragraphs 7.24 - 7.25; for a discussion of bracketed standard subdivisions, see paragraph 7.26.)

7.7 Standard subdivisions are also bracketed under a *hook number*, that is, a number that has no meaning in itself, but is used to introduce specific examples of a topic. Hook numbers have headings that begin with "Miscellaneous," "Other," or "Specific"; and do not contain add notes, including notes, or class-here notes. For example:

652.302 Specific levels of skill
Notes

7.8 Notes are important because they supply information that is not obvious in the notational hierarchy or in the heading with regard to order, structure, subordination, and other matters. Notes may appear in the record for a number or a span of numbers. Notes may also appear at the beginning of a table. Footnotes are used for instructions that apply to multiple subdivisions of a class, or to a topic within a class. Individual entries in the Manual are also considered notes.

7.9 Notes in the schedules and tables generally appear in the following order: revision, former-heading, definition, number-built, standard-subdivisions-are-added, variant-name, scope, including, class-here, arrange, add (including subdivisions-are-added), build, preference, discontinued, relocation, class-elsewhere, see-reference, see-also reference, see-Manual, and option notes.

7.10.1 The notes below (A) describe what is found in the class and its subdivisions; (B) identify topics in standing room, i.e., topics with insufficient literature to have their own number; (C) describe what is found in other classes; and (D) explain changes in the schedules and tables. Other notes are described in the sections on number building (paragraphs 8.1 - 8.22), citation and preference order (paragraphs 9.1 - 9.6), the Manual (paragraphs 10.1 - 10.6), and options (paragraphs 12.1 - 12.5).

(A) Notes That Describe What Is Found in a Class

7.11 Definition notes indicate the meaning of a term in the heading. For example:

364 Criminology
  Crime and its alleviation
7.12 *Scope notes* indicate whether the meaning of the number is narrower or broader than is apparent from the heading. For example:

700 The arts Fine and decorative arts

    Description, critical appraisal, techniques, procedures, apparatus, equipment, materials of the fine, decorative, literary, performing, recreational arts

7.13 *Number-built notes* identify and explain the source of built numbers included in the schedules and tables. Built numbers are occasionally included in the schedules or tables to provide additional information or to indicate exceptions to regular add instructions. For example:

353.132 63 Foreign service

    Number built according to instructions under 352 - 354
    Class here consular and diplomatic services

7.14 *Former-heading notes* are given only when the heading associated with a class number in the previous edition has been altered to such a degree that the new heading bears little or no resemblance to the previous heading, even though the meaning of the number has remained substantially the same.

659.131 5 Industrial advertising

    Former heading: Advertising directed to vocational uses

7.15 *Variant-name notes* are used for synonyms or near synonyms. For example:

332.32 Savings and loan associations

    Variant names: building and loan associations, building societies, home loan associations, mortgage institutions
7.16 *Class-here notes* list major topics in a class. These topics may be broader or narrower than the heading, overlap it, or define another way of looking at essentially the same material. Topics in class-here notes are considered to *approximate the whole* of the class. For example:

371.192 Parent-school relations

Class here parent participation in schools; comprehensive works on teacher-parent relations

*Standard subdivisions may be added for any topic in a class-here note.* (For a detailed discussion of the use of standard subdivisions for concepts that approximate the whole of a class, see paragraphs 8.3 - 8.10 and the beginning of Table 1.)

7.17 Class-here notes are also used to indicate where interdisciplinary and comprehensive works are classed. *Interdisciplinary works* treat a subject from the perspective of more than one discipline. For example:

391 Costume and personal appearance

Class here interdisciplinary works on costume, clothing, fashion

*Comprehensive works* treat a subject from various points of view within a single discipline. Comprehensive works may be stated or implied in a class-here note. For example:

641.815 Breads and bread-like foods

Class here comprehensive works on baked goods  

—411 5 Highland

Class here Scottish Highlands  

(Stated)
(B) Including Notes (Notes That Identify Topics in Standing Room)

7.18 Including notes identify topics that have "standing room" in the number where the note is found. Standing room numbers provide a location for topics with relatively few works written about them, but whose literature may grow in the future, at which time they may be assigned their own number. For example:

362.16 Extended care medical facilities

   Including convalescent homes, sanatoriums for persons suffering from chronic diseases

Standard subdivisions cannot be added for topics in standing room, nor are other number-building techniques allowed.

7.19 Entries in the taxonomic schedules in 579–590 may have two including notes. The first including note contains the scientific taxonomic names at or above the level of family. The second one contains common and genus names. For example:

593.55 Hydrozoa

   Including Chondrophora, Hydroida, Milleporina, Pteromedusae, Siphonophora, Stylasterina, Trachylina

   Including hydras, Portuguese man-of-war
(C) Notes That Describe What Is Found in Other Classes

7.20 *Class-elsewhere notes* lead the classifier to interrelated topics, or distinguish among numbers in the same notational hierarchy. They are used to show preference order, to lead to the comprehensive or interdisciplinary number, to override the first-of-two rule, or to lead to broader or narrower topics in the same hierarchical array that might otherwise be overlooked. They may point to a specific number, or to a concept scattered throughout the schedules. All notes that begin with the word "class" are class-elsewhere notes, except when they begin with "class here."

791.43  Motion pictures

Class photographic aspects of motion pictures in 778.53; class made-for-TV movies, videotapes of motion pictures in 791.45

370.15  Educational psychology

Class interdisciplinary works on psychology in 150. Class psychology of a specific topic in education with the topic, plus notation 019 from Table 1, e.g., psychology of special education 371.9019

155.4  Child psychology

Class interdisciplinary works on child development in 305.231
7.21 *See references* lead from a stated or implied comprehensive number for a concept to the component (subordinate) parts of that concept in a different notational hierarchy. See references also lead from the interdisciplinary number for a concept to treatment of the concept in other disciplines. A see reference may point to a specific number, or to a concept scattered throughout the schedules. Each see reference begins with the word "For" and appears in italics. For example:

577.7 Marine ecology

*For salt lake ecology, see 577.639; for saltwater wetland and seashore ecology, see 577.69*

305.4 Women

*Class here interdisciplinary works on women, on females*

*For a specific aspect of women not provided for here, see the aspect, e.g., women’s suffrage 324.623, legal status of women 346.0134*

Throughout Table 2, see references (often in footnote form) lead from the implied comprehensive number for a jurisdiction, region, or feature to its subordinate parts in other classes.

—411 5 Highland

*Class here *Scottish Highlands*

*For a specific part of this jurisdiction, region, or feature, see the part and follow instructions under  —4 - 9*
See-also references lead the classifier to related topics. They are reminders that minor
differences in wording and context can imply differences in classification. Each see-also
reference appears in italics. For example:

584.3 Liliidae

Class here Liliales, lilies

*For Orchidales, see 584.4*

*See also 583.29 for water lilies*

(D) Notes That Explain Changes or Irregularities in the Schedules and Tables

7.23 Revision notes warn users that there have been changes in the subdivisions of a class
since the previous edition. A complete or extensive revision is always introduced by a
revision note that appears first under the heading of the class affected. (There are no
complete or extensive revision notes in DDC 22.)

7.24 Discontinued notes indicate that all or part of the contents of a number have been moved
to a more general number in the same hierarchy, or have been dropped entirely. For
example:

[306.853] Suburban family

Number discontinued; class in 306.85

616.852 23 Panic disorder

Use of this number for comprehensive works on anxiety disorders
discontinued; class in 616.8522

7.25 Relocation notes state that all or part of the contents of a number have been moved to a
different number. For example:

[624.5] Suspension and cable-stayed bridges
Relocated to 624.23

381.149 Discount stores

Discount stores that are retail stores relocated to 381.15

The former number is usually given at the new number, either in the heading or in the appropriate note. For example:

624.23 Suspension and cable-stayed bridges [both formerly 624.5]

381.15 Outlet stores

Class here discount stores that are outlet stores [formerly 381.149] . . .

7.26 Do-not-use notes instruct the classifier not to use all or part of the regular standard subdivision notation or an add table provision in favor of a special provision, or standard subdivisions at a broader number. When the whole standard subdivision should not be used, the note appears under a bracketed standard subdivision; when only part of the standard subdivision is displaced, the part displaced is specified. For example:

[374.809] Historical, geographic, persons treatment

Do not use; class in 374.9

320.409 Historical and persons treatment

Do not use for geographic treatment; class in 320.41 - 320.49

Number Building

8.1 The classifier will often find that to arrive at a precise number for a work it is necessary to build or synthesize a number that is not specifically listed in the schedules. Such built numbers allow for greater depth of content analysis. They are used only when instructions in the schedules make them possible (except for standard subdivisions, which are discussed in paragraphs 8.3 - 8.10). Number building begins with a base
number (always stated in the instruction note) to which another number is added.

8.2 There are four sources of notation from which to build numbers: (A) Table 1 Standard Subdivisions; (B) Tables 2 - 6; (C) other parts of the schedules; and (D) add tables in the schedules.

(A) Adding Standard Subdivisions from Table 1

8.3 A standard subdivision represents a recurring physical form (such as a dictionary, periodical, or index) or approach (such as history or research) and thus is applicable to any subject or discipline that covers or approximates the whole of the meaning of the number. Here are a few examples with the standard subdivision concept underlined (in some cases an extra 0 precedes the standard subdivision according to instructions found in the schedules):

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>150.5</td>
<td>Periodical on psychology</td>
</tr>
<tr>
<td>230.003</td>
<td>Dictionary of Christianity</td>
</tr>
<tr>
<td>340.02573</td>
<td>Directory of lawyers in the U.S.</td>
</tr>
<tr>
<td>401</td>
<td>Philosophy of language</td>
</tr>
<tr>
<td>507.8</td>
<td>Use of apparatus and equipment in the study and teaching of science, e.g., science fair projects</td>
</tr>
<tr>
<td>624.0285</td>
<td>Computer applications in civil engineering</td>
</tr>
<tr>
<td>796.912092</td>
<td>Biography of a figure skater</td>
</tr>
<tr>
<td>808.0071</td>
<td>Teaching of rhetoric</td>
</tr>
</tbody>
</table>

Further instructions on using Table 1 are found at the beginning of Table 1. See also Manual notes on selected standard subdivisions.

8.4 Standard subdivisions are not usually listed in the schedules except where needed to fill out three-digit numbers, e.g., 605 Serial publications, and in a few other instances. Standard subdivisions may be listed in the schedules when the subdivisions have special meanings, when extended notation is required for the topic in question, or when notes are required. The rest of standard subdivisions from Table 1 may be used with their regular meanings.

8.5 Notation from Table 1 Standard Subdivisions may be added to any number in the schedules unless there is a specific instruction to the contrary. The classifier should never use more than one zero in applying a standard subdivision unless instructed to do so. If
more than one zero is needed, the number of zeros is always indicated in the schedules. When using standard subdivisions with numbers built by adding from Tables 2 - 6 or other parts of the schedules, be sure to check the table or schedule used for the segment preceding the standard subdivision for special instructions on the number of zeros.

8.6 Do not add multiple standard subdivisions to the same number except when specifically instructed to do so, and in a few other instances. A second standard subdivision may be added with standard subdivisions that have changed or extended meanings. For example, notation 03 from Table 1, the standard subdivision for encyclopedias, may be added to 370.15 Educational psychology to represent educational psychology 370.1503 because the regular meaning of 370.15 (scientific principles) has been discontinued to 370.1 and replaced by an extended meaning of the standard subdivision for psychological principles at this number. When standard subdivisions are displaced to nonzero numbers (usually for geographic treatment), the full range of standard subdivisions may be added, e.g., the management of penal institutions in Great Britain 365.941068.

8.7 Standard subdivisions should not be used where redundant, i.e., where the subdivision means the same as the base number, or where application of the standard subdivision would needlessly segregate material by aspects not emphasized by the author. For example, do not add notation 024694, which represents the subject for carpenters, to topics in 694 Carpentry, since works on a subject are written primarily for its practitioners. Likewise, do not add notation 0905, which represents the state-of-the-art, to general works on a subject because most users will expect to find such works in the main number. Special care should be taken in adding standard subdivisions to built numbers, since the standard subdivision applies to the whole number and not just part of the number.

8.8 The table of preference at the beginning of Table 1 yields to two other rules, the rule of application and the rule of zero. By the rule of application, teaching financial management in hospital administration is classed in 362.110681, not 362.11071, even though notation 07 is above notation 068 in the table of preference. The rule of zero overrides the table of preference when standard subdivisions are displaced to nonzero positions, e.g., management of prisons in Great Britain 365.941068, not 365.068 as would be the case if prisons in Great Britain were classed in 365.0941. (For a discussion of the rule of application and rule of zero, see paragraph 5.7; for a discussion of displaced standard subdivisions, see paragraphs 7.26 and 8.6.)
8.9 The most important caveat with respect to standard subdivisions is that they are added only for works that cover or approximate the whole of the subject of the number. For example, a work on black widow spiders of California should be classed in the number for spiders 595.44 (not 595.4409794, the number for spiders in California). The classifier should not attempt to specify California because black widow spiders do not approximate the whole universe of spiders in California, and there is not a specific number available for black widows. Likewise, class a work on the De Havilland 98 Mosquito (a specific British World War II fighter-bomber) in the number for fighter-bombers 623.7463 (not 623.7463094109044, the number for British fighter-bombers in World War II).

8.10 Standard-subdivisions-are-added notes indicate which topics in a multiterm heading may have standard subdivisions added for them because the designated topics are considered to approximate the whole of the subject. For example:

639.2 Commercial fishing, whaling, sealing

Standard subdivisions are added for commercial fishing, whaling, sealing together; for commercial fishing alone

Standard-subdivisions-are-added notes do not have hierarchical force.

(B) Adding from Tables 2–6

8.11 The classifier may be instructed to add notation from Tables 2 - 6 to a base number from the schedules or to a number from a table. A summary of the use of each table follows. Further instructions on using Tables 2 - 6 are found at the beginning of each table. See also the Manual notes for Tables 2 - 6.

8.12 Table 2 Geographic Areas, Historical Periods, Persons. The major use of Table 2 is with notation 09 from Table 1, where it can be added to every number in the schedule unless there are specific instructions to the contrary. For example, reading instruction in the primary schools of Australia is 372.40994 (372.4 reading instruction in primary schools + 09 Historical, geographic, persons treatment from Table 1 + 94 Australia from Table 2). Notation from Table 2 is also added through the use of other standard subdivisions from Table 1 (e.g., standard subdivisions 025, 074).

8.13 Area notation is sometimes added directly to schedule numbers, but only when specified
in a note. For example:

373.3–373.9 Secondary education in specific continents, countries, localities

Add to base number 373 notation 3 - 9 from Table 2, e.g., secondary schools of Australia 373.94

8.14 **Table 3 Subdivisions for the Arts, for Individual Literatures, for Specific Literary Forms.** These subdivisions are used in class 800 as instructed, usually following numbers for specific languages in 810 - 890. Table 3C subdivisions are also added as instructed to numbers in Table 3B, 700.4, 791.4, and 808 - 809.

8.15 **Table 4 Subdivisions of Individual Languages and Language Families.** These subdivisions are used as instructed in class 400, following numbers for designated specific languages or language families in 420 - 490.

8.16 **Table 5 Ethnic and National Groups.** Notation from Table 5 is added through the use of standard subdivision 089 from Table 1, e.g., Ceramic arts of Chinese artists throughout the world is 738.089951 (738 Ceramic arts + 089 Ethnic and national groups from Table 1 + 951 Chinese from Table 5).

8.17 Table 5 notation may also be added directly to schedule numbers, but only when specified in a note. For example:

155.84 Specific ethnic and national groups

Add to base number 155.84 notation 05 - 99 from Table 5, e.g., ethnopsychology of African Americans 155.8496073

8.18 **Table 6 Languages.** The major uses of Table 6 notation are to provide the basis for building a specific language number in 490 (to which notation from Table 4 is sometimes added) and to provide the basis for building a specific literature number in 890 (to which notation from Table 3 is sometimes added). Table 6 notation is also used in Table 2 under —175 Regions where specific languages predominate, and at various points in the schedules.

(C) **Adding from Other Parts of the Schedules**
8.19 There are many instructions to make a direct addition to a number from another part of the schedules. For example:

809.935 Literature emphasizing subjects

Add to base number 809.935 notation 001 - 999, e.g., religious works as literature 809.9352, biography and autobiography as literature 809.93592

In this example, the 2 in 809.9352 comes from 200 Religion, the 92 in 809.93592 from 920 Biography, genealogy, insignia.

8.20 In many cases, part of a number may be added to another number upon instruction. For example:

372.011 Elementary education for specific objectives

Add to base number 372.011 the numbers following 370.11 in 370.111 - 370.119, e.g., character education 372.0114

In this example, 4 comes from 370.114 Moral, ethical, character education. Sometimes numbers are taken from more than one place in the schedules; in such cases the procedure for the second addition is the same as for the first.

(D) Adding from Tables Found in the Schedules

8.21 Add tables in the schedules provide numbers to be added to designated schedule numbers (identified by a symbol and accompanying footnoted instruction); these tables must be used only as instructed. For example:

616.973 *Contact allergies

Class here allergic contact dermatitis, allergies of skin

The asterisk in the entry above leads to the following footnote: "Add as instructed under 616.1 - 616.9." The add table at 616.1 - 616.9 is used only for diseases tagged
with an asterisk or for diseases in class-here notes under headings tagged with an asterisk. Notation from the add table, such as 061 Drug therapy, may be used for 616.973 Contact dermatitis (tagged with an asterisk) and for allergic contact dermatitis and allergies of skin (in the class-here note).

8.22 Subdivisions-are-added notes indicate which terms in a multiterm heading may have subdivisions applied to them. For example:

616.51  *Dermatitis, photosensitivity disorders, urticaria

Subdivisions are added for dermatitis, photosensitivity disorders, urticaria together; for dermatitis alone

Citation and Preference Order

9.1 Citation and preference order must be considered when multiple aspects or characteristics of a subject (such as age, area, gender, historical periods, national origin) are provided for in the Classification, and a single work treats more than one of them.

Citation Order

9.2 Citation order allows the classifier to build or synthesize a number using two or more characteristics (facets) as specified in instruction notes. Success in building a DDC number requires determining which characteristics apply to a specific work, and then determining from the instructions in the schedule the sequence in which the facets will be ordered.

9.3 Citation order is always carefully detailed in number-building instructions. For example:

909.04  History with respect to ethnic and national groups

Add to base number 909.04 notation 05 - 99 from Table 5, e.g., world history of Jews 909.04924; then add 0 and to the result add the numbers following 909 in 909.1 - 909.8, e.g., world history of Jews in 18th century 909.0492407

For a work on the world history of the Jews in the 18th century, this note stipulates
the following citation order for the individual facets of the full subject: world history + specific ethnic or national group + historical period. The historical period is introduced by the *facet indicator* 0.

### Preference Order

9.4 If there is no provision to show more than one of the aspects or characteristics, it is a matter of preference (because a choice must be made among several characteristics). Preference notes supply either an instruction or table establishing the order in which to make the choice. An example of a preference instruction is found at 305.9:

305.9 Occupational and miscellaneous groups

Unless otherwise instructed, class a subject with aspects in two or more subdivisions of 305.9 in the number coming last, e.g., unemployed librarians 305.9092 (*not* 305.90694)

In this case, the base subject is a group of persons; the two characteristics are employment status and occupational status. The occupation of librarian (305.9092) falls after unemployed status (305.90694) in the DDC hierarchy; following the instructions in the preference note, the characteristic that must be chosen is librarian (305.9092). (For an example of a preference instruction using a class-elsewhere note, see paragraph 7.20.)

9.5 An example of a table indicating preference order is found at 305:

305 Social groups

Unless other instructions are given, observe the following table of preference, e.g., African American male youths 305.235108996073 (*not* 305.3889607300835 or 305.896073008351):

- Persons with disabilities and illnesses, gifted persons 305.908
- Age groups 305.2
- Groups by sex 305.3 - .4
- Social classes 305.5
- Religious groups 305.6
- Ethnic and national groups 305.8
9.6 Classifiers often must distinguish between preference order instructions and the first-of-two rule in the same schedule. If the work treats two subjects, apply the first-of-two rule. If the work treats two aspects of the same subject, apply the preference order instructions. When the preference order instruction is to class with the last, the first-of-two rule and the preference order instructions may lead the classifier in opposite directions. For example, a bibliography of newspapers and pamphlets giving equal treatment to each would be classed according to the first-of-two rule in 011.33 (bibliography of pamphlets) rather than 011.35 (bibliographies of newspapers). A bibliography of microform newspapers (i.e., newspapers in microform form) would be classed according to the preference note at 011.1 - 011.8: "Unless other instructions are given, class a subject with aspects in two or more subdivisions of 011.1 - 011.8 in the number coming last . . ."; thus, the bibliography of microform newspapers would be classed in 011.36 (bibliographies of microforms) rather than 011.35 (bibliographies of newspapers). (For a discussion of the first-of-two rule, see paragraph 5.7.)

The Manual

10.1 The Manual gives advice on classifying in difficult areas, and provides guidance on choosing between related numbers.

10.2 See-Manual references in the schedules and tables refer the classifier to the Manual for additional information about a certain number, range of numbers, or choice among numbers. In some cases, the see-Manual reference refers only to a portion of a longer Manual note, or topic narrower than the numbers in the heading, e.g., "See Manual at 930-990: Historic preservation." The see-Manual reference is repeated in the entries for each of the numbers or number spans covered in the Manual note. For example, "See Manual at 004.21 vs. 004.22, 621.392" is listed in the entries for 004.21, 004.22, and 621.392.

10.3 Brief Manual-like notes are sometimes given directly in the schedule or table entry. For example:

631.583 Controlled-environment agriculture
Most works on use of artificial light in agriculture will be classed in 635.0483 and 635.9826

Arrangement and Format of the Manual

10.4 The Manual is arranged by table and schedule numbers, with the broadest span coming before entries for narrower spans or individual numbers. Manual notes are entered under the preferred or "if-in-doubt" number. If there is no if-in-doubt number, prefer the interdisciplinary number.

10.5 The Manual note heading summarizes the contents of the note. The terms in the Manual note headings need not match the terms associated with the same number(s) in the tables and schedules if the note is narrower than the number, or the note refers to more than one number.

510

Mathematics

510, T1—0151 vs. 003, T1—011

510, T1—0151 vs. 003, T1—011

Systems

10.6 If the Manual note is very long, or part of the note focuses on a topic narrower than the heading, subheadings may be provided. For example:

T1—068 vs. 353-354

Public administration and management in specific fields

Exceptions (subheading)
The Relative Index

11.1 The Relative Index is so named because it relates subjects to disciplines. In the schedules, subjects are distributed among disciplines; in the Relative Index, subjects are arranged alphabetically, with terms identifying the disciplines in which they are treated subarranged alphabetically under them. For example:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hospitals</td>
<td>362.11</td>
</tr>
<tr>
<td>accounting</td>
<td>657.832 2</td>
</tr>
<tr>
<td>animal husbandry</td>
<td>636.083 2</td>
</tr>
<tr>
<td>architecture</td>
<td>725.51</td>
</tr>
<tr>
<td>armed forces</td>
<td>355.72</td>
</tr>
<tr>
<td>Civil War (United States)</td>
<td>973.776</td>
</tr>
<tr>
<td>construction</td>
<td>690.551</td>
</tr>
<tr>
<td>energy economics</td>
<td>333.7964</td>
</tr>
<tr>
<td>institutional housekeeping</td>
<td>647.965 1</td>
</tr>
<tr>
<td>landscape architecture</td>
<td>712.7</td>
</tr>
<tr>
<td>law</td>
<td>344.032 11</td>
</tr>
<tr>
<td>liability law</td>
<td>346.031</td>
</tr>
<tr>
<td>meal service</td>
<td>642.56</td>
</tr>
<tr>
<td>pastoral theology</td>
<td>206.1</td>
</tr>
<tr>
<td>Christianity</td>
<td>259.411</td>
</tr>
<tr>
<td>social theology</td>
<td>206.762 11</td>
</tr>
<tr>
<td>Christianity</td>
<td>261.832 11</td>
</tr>
<tr>
<td>social welfare</td>
<td>362.11</td>
</tr>
<tr>
<td>United States Revolutionary War</td>
<td>973.376</td>
</tr>
<tr>
<td>World War I</td>
<td>940.476</td>
</tr>
<tr>
<td>World War II</td>
<td>940.547 6</td>
</tr>
</tbody>
</table>

see also Health services

In some cases the term implies rather than states the discipline. In the example above, the discipline of architecture is listed, but the discipline of military science is implied by "armed forces."

11.2 The Relative Index is primarily an index to the DDC as a system. It includes most terms found in the schedules and tables, and terms with literary warrant for concepts represented by the schedules and tables. The Relative Index is not exhaustive. If the term sought is not found, the classifier should try a broader term, or consult the
schedules and tables directly. The schedules and tables should always be consulted before a number found in the Relative Index is applied.

**Arrangement and Format of the Relative Index**

11.3 Index entries are arranged alphabetically word by word, e.g., Birth order precedes Birthday. Entries with the same word or phrase but with different marks of punctuation are arranged in the following order:

- Term
- Term. Subheading
- Term (Parenthetical qualifier)
- Term, inverted term qualifier
- Term as part of phrase

Initialisms and acronyms are entered without punctuation and are filed as if spelled as one word. Hyphens are ignored and treated as a space. Terms indented below the main headings are alphabetized in one group even though they may be a mixture of disciplines, topical subheadings, and, to a limited extent, words that form phrases or inverted phrases when combined with the main heading.

11.4 Class numbers are listed in groups of three digits for ease of reading and copying. The spaces are not part of the numbers and do not represent convenient places to abridge the number.

11.5 See-also references are used for synonyms and for references to broader terms (but only when three or more new numbers will be found at the synonym or broader term), and for references to related terms (which may provide only one or two new numbers).

11.6 See-Manual references lead the classifier to relevant discussions in the Manual.

11.7 Numbers drawn from Tables 1 - 6 are prefixed by T1 through T6. (For a complete listing of table names and abbreviations, see paragraph 7.4.)
Interdisciplinary Numbers

11.8 The first class number displayed in an index entry (the unindented term) is the number for interdisciplinary works. If the term also appears in a table, the table number is listed next, followed by other aspects of the term. The discipline of the interdisciplinary number may be repeated as a subentry if the discipline is not clear. For example:

- Adult education  374
  T1 —0715
- federal aid   379.121 5
- law           344.074
- public administrative support 353.84
- public support 379.114
- law           344.076 85
- special education 371.904 75
- university extension 378.175

11.9 Interdisciplinary numbers are not provided for all topics in the Relative Index. They are omitted when the index entry is ambiguous, does not have a disciplinary focus, or lacks literary warrant. In such cases, there is no number opposite the unindented entry. For example:

- Coagulation
  - blood     573.159
  - human physiology  612.115
  - physiology      573.159
  - water supply treatment  628.162 2

(For more information on interdisciplinary numbers, see paragraphs 5.8, 7.17, 7.20 - 7.21.)

Terms Included in the Relative Index

11.10 The Relative Index contains most terms found in the headings and notes of the schedules and tables, and synonyms and terms with literary warrant for concepts
represented by the schedules and tables. The Relative Index also contains terms for
the broad concepts covered in Manual notes.

Inverted phrases are avoided, except for personal and geographic names (see
paragraphs 11.12 - 11.13). Qualifiers are used for homonyms, ambiguous terms, and
most initialisms and abbreviations. The most common use of the term may not be
qualified. Disciplinary qualifiers are avoided.

11.11 The following types of names from Table 2 Geographic Areas are included in the
Relative Index: (A) names of countries; (B) names of the states and provinces of most
countries; (C) names of the counties of the United States; (D) names of capital cities and
other important municipalities; and (E) names of certain important geographic features.

11.12 Also included in the Relative Index are the personal names of the following groups of
persons: heads of state used to identify historical periods, e.g., Louis XIV; founders
or revealers of religions, e.g., Muhammad; initiators of schools of thought when used
to identify the school, e.g., Smith, Adam.

11.13 Place names and other proper names are generally given in the form specified by the
second edition, 2002 revision, of the Anglo-American Cataloguing Rules (AACR2),
based on the names established in the Library of Congress authority files. If the AACR2
form is not the common English name, an entry is also included under the familiar
form of the name.

Plants and animals are indexed under their scientific and common names.

11.14 The choice of singular form versus plural form follows ISO 999:1996,
Guidelines for the content, organization and presentation of indexes. Count nouns are
generally in the plural; noncount nouns and abstract concepts are generally in the
singular. Parts of the body are in the plural only when more than one occurs in a fully
formed organism (e.g., ears, hands, nose). Plants and animals follow scientific
convention in choice of singular form versus plural form, with the decision based on
whether the taxonomic class has more than one member (e.g., Horses, Lion, Lipizzaner
horse). Where usage varies across disciplines, the index entry reflects the form preferred
in the discipline where interdisciplinary works are classified.

Terms Not Included in the Relative Index
11.15 Terms usually not included in the Relative Index are:

(A) Phrases beginning with the adjectival form of countries, languages, nationalities, religions, e.g., English poetry, French cooking, Italian architecture, Hindu prayer books.

(B) Phrases that contain general concepts represented by standard subdivisions such as education, statistics, laboratories, and management; e.g., Art education, Educational statistics, Medical laboratories, Bank management.

When there is strong literary warrant for such a phrase heading as a sought term, it may be included in the Relative Index, e.g., English literature. When the phrase heading is a proper name or provides the only form of access to the topic, it may also be included, e.g., English Channel, French horns, Amharic literature.

Options

12.1 Some devices are required to enable the DDC to serve needs beyond those represented in the standard English-language edition. At a number of places in the schedules and tables, options are provided to give emphasis to an aspect in a library's collection not given preferred treatment in the standard notation. In some cases, options are also suggested to provide shorter notation for the aspect.

12.2 Options are provided throughout the Classification to emphasize jurisdiction, ethnic or national group, language, topic, or other characteristic.

12.3 Options described in notes appear in parentheses and begin with "Option:". Options that apply to the full entry appear at the end of the entry; options to a specific instruction in the entry are indented under the appropriate note. For example, the following option appears at the end of the entry for 420 - 490:

(Option B: To give local emphasis and a shorter number to a specific language, place it first by use of a letter or other symbol, e.g., Arabic language 4A0 [preceding 420], for which the base number is 4A. Option A is described under 410)

12.4 Some optional numbers are enumerated in the schedules and tables and appear in
12.5 Parentheses in the number column. A special optional arrangement (222) - (224) for books of the Bible as arranged in Tanakh appears as a subsection of the Manual note for 221.

12.5 *Arrange-alphabetically* and *arrange-chronologically notes* are not placed in parentheses, but are also options. They represent suggestions only; the material need not be arranged alphabetically or chronologically. An example of an arrange-alphabetically note is found at 005.133 Specific programming languages: "Arrange alphabetically by name of programming language, e.g., C++.*"

12.6 Some national libraries and central cataloging authorities assign a few optional numbers, e.g., the National Library of Canada uses C810 for Canadian literature in English and C840 for Canadian literature in French.

12.7 Most of the time, the responsibility for implementing an option rests with the local library. Libraries should weigh the value of using an option against the loss in interoperability of numbers. The library will not be able to use numbers assigned by other libraries, and other libraries will not be able to use the optional numbers. In addition, unless the option is widely used in a region, users may be confused by the alternate notation.

**Close and Broad Classification**

13.1 The Dewey Decimal Classification provides the basic option of close versus broad classification. *Close classification* means that the content of a work is specified by notation to the fullest extent possible. *Broad classification* means that the work is placed in a broad class by use of notation that has been logically abridged. For example, a work on French cooking is classed closely at 641.5944 (641.59 Cooking by place + 44 France from Table 2), or broadly at 641.5 (Cooking).

13.2 A library should base its decision on close versus broad classification on the size of its collection and the needs of its users. For example, a work on the sociology of sibling relationships in Canadian society would be most usefully classed in 306.8750971 (306.875 Sibling relationships + 09 Geographic treatment from Table 1 + 71 Canada from Table 2) in a research library or large public library. A small school library might prefer to class the same work in the broader number (306.875) without including the geographic facet in the notation. An engineering library might prefer close classification
for works in engineering, but broad classification for disciplines outside science and technology.

13.3 The classifier should never reduce the notation to less than the most specific three-digit number (no matter how small the library's collection). A number also must never be reduced so that it ends in a 0 anywhere to the right of the decimal point.

13.4 One aid to logical abridgment of DDC numbers is the segmentation device provided by the Decimal Classification Division of the Library of Congress and some other centralized cataloging services.

13.5 The abridged edition of the Dewey Decimal Classification is another source for broad classification. It is intended for libraries with collections of 20,000 volumes or less.
