Our traditional model was one in which we thought of **the user in the life of the library**…

… but we are now increasingly thinking about **the library in the life of the user**.

"Improvement for our patrons…"

"The whole thing is more intuitive than what we were using before. I love how easy it is to see everything in the queues… We knew this would be an improvement for our patrons and our workflow and it has been. We've been glad to be there from the start as an early adopter."

"accelerated our response times…"

"In former times, our integrated library system meant only that a common set of servers and databases were used. There was very little real integration or sharing of data and workflows in a way that could streamline our operations. With WMS, the integrated workflows are so fluid that it has accelerated our response times far beyond our initial expectations."
