priorities.

How can you increase your library's efficiency?

More than ever, libraries have to manage a wide range of resources. You need a cost-effective way to manage cataloguing, circulation, acquisitions, accounts, and reporting for everything in your library. OLIB is a fully proven library management system for digital media and traditional materials, operating in academic, special, and corporate libraries worldwide. Essentially, this comprehensive and flexible management system allows you time to do what you do best: connecting individuals to knowledge.

Comprehensive and flexible management system

OLIB is a complete ILS that includes circulation, cataloguing, new-generation OPAC, funds and acquisitions, serials control, reporting, enquiry management, and data import and export.

- Fully integrated OLIB reporting suite includes a library of standard reports that can be enhanced to suit your future needs.
- New-generation OPAC retrieves results based on natural language searching and offers new-generation social features.
- Cataloguing includes customisable data entry screens for all media, including optional MARC integration with WorldCat®.

OLIB is a highly configurable integrated library system that allows you to customise all areas of library management and end-user discovery to reflect your local requirements, thereby enabling more efficient workflows and saving staff time. With this proven, functionally rich system, you get added value at an attainable cost.

Get integrated library management tailored to your individual needs.

By having a library management system that can be built around what you need, your staff can focus on other areas, adding further value for your users as less time is taken up on routine tasks. **Together, we can provide more for your users.**

Reduce your technology costs and your reliance on IT support by choosing OLIB hosted services.

OCLC has handled hardware and software updates for OLIB hosted users for more than ten years. And because OLIB is fully scalable, we can host libraries of any size—from those with only a handful of staff users to large systems with hundreds of users. A web-based staff interface facilitates ease of use throughout your organisation.

Empower users by providing more social features with the new-generation OPAC, enabling interaction and participation with the library, including a recommender service and tagging. Users have access to enhanced data, including reading lists, e-links, and faceted searching, presented in a clear and concise interface. Your organisation can maximise the benefits of online resources by offering more than just traditional catalogue searching to make your holdings more accessible.

Access in-depth analytical cataloguing. Records for items such as journal articles and abstracts or musical parts can be catalogued and searched for with the same degree of accuracy and availability as top-level records.

Offer more to users. OLIB allows you to integrate with other related systems in your organisation, providing more flexible access to a wider range of resources.

Visit oclc.org/OLIB or contact uk@oclc.org to find out more.

Learn more about how OLIB can help your library by contacting our team of Library Services Consultants, who can get you all the information you need to make an informed decision.

Because what is known must be shared.®
