

Streamline and
secure access to

e-resources.

Simplify access to e-resources

Library users expect a seamless experience when accessing e-content. EZproxy connects them to the information they need using the single sign-on credentials, granting them continuous remote access to e-content without the hassle of remembering various passwords and usernames.

Effortlessly manage your EZproxy environment with our new web-based configuration UI, designed to replace complex manual editing with a streamlined, intuitive interface. This powerful tool allows you to implement critical updates and changes in seconds, ensuring your library resources remain accessible with minimal technical overhead.

Maintain privacy and security

EZproxy was built to advance the crucial role libraries play in protecting user privacy. When a user requests access to e-content, EZproxy passes an EZproxy IP address to the content provider instead of the user's IP address, which ensures their identity is protected. You can control important user data workflows too to determine if and with whom any user data is shared.

EZproxy also uses a robust and customizable set of security rules to detect and disable compromised single sign-on credentials before they can be used to exploit any systems or data, protecting your users and community from security threats.

EZproxy allows your library to deliver e-content to your users simply, effectively, and securely. EZproxy facilitates a single sign-on to e-content using your institution's preferred authentication method, such as SAML or LDAP, while protecting user privacy.

Connect library users to e-content with a single sign-on.

EZproxy allows library users continuous access to e-content without the hassle of remembering various passwords and usernames. This provides easy and secure access to the information they need **to make breakthroughs possible.**

Meet IT system requirements.

EZproxy meets both library and IT needs by connecting to most identity management systems and supporting many different authentication schemes. It's also set up and managed by OCLC, so library IT teams can focus on other projects. We provide software and hardware management, SSL certificate management, data backup and recovery, and 24/7 uptime monitoring.

Better understand e-resource ROI.

Because EZproxy collects data at the point of authentication, it offers a robust and trusted source of insights into who's using what library resources, when, and from where. Some of these insights are included in monthly summary usage reports. You can get a more holistic and meaningful view of e-resource ROI with EZproxy Analytics, a turnkey analytics solution that extracts, enriches, and visualizes your EZproxy data.

"Right authentication solution ..."

"If you're looking for the right authentication solution for all your publishers, then I haven't seen one better."
