Collective collections/shared print

Evolving scholarly
record

RDM

Distinctive colls

Research libraries achieved status in this environment by acquiring more than their peers or by building niche collections of particular depth.

...

Collections no longer lie at the center of research library operations and goals, even as academic communities focus ever more inclusively on knowledge and information.

Hazen. Lost in the cloud. 2011

Expertise and reputation:
 Identity > workflow > content

A publisher's new job description

Annette Thomas,
Then CEO of Macmillan
Publishers

Her view is that publishers are here to **make the scientific research process more effective** by helping them keep up to date, find colleagues, plan experiments, and then share their results. **After they have published, the processes continues** with gaining a reputation, obtaining funds, finding collaborators, and even finding a new job. What can we as publishers do to address some of **scientists' pain points**?

Scaling
innovation

Scaling
influence

Libraries need to collaborate to create impact and efficiency.

Libraries need to more actively mobilise their networks of shared practice to address grand challenges as research and learning behaviors change in a network environment.

Libraries need to collaboratively advocate for user and library interests in an increasingly complicated environment.

OPPORTUNITIES FOR INNOVATION: FINDINGS OF THE EMEARC SURVEY

What is the EMEARC survey?

- A survey of libraries at 238 research universities in the UK, the Netherlands, Germany, Austria, Switzerland, Denmark, Spain, France, and Italy
- Spearheaded by EMEA Regional Council (EMEARC)
- Gain intelligence regarding innovation trends, capacities and priorities within the European research library community.
- Scope the opportunity space for OCLC Research, and the OCLC Research Library Partnership.

Working group

- OCLC Europe, Middle East, Africa Regional Council

INTERVIEWS WITH UK LIBRARY DIRECTORS

Interview questions

1. To what do you attribute the expected increase in use of the library?
2. What is a technology centre?
3. Increased use of the library as a social/meeting space: trend?
4. Increased support for research: how do you shift resources?
5. Servicing print collections: role of shared print?
6. Special collections: not a priority area?
7. Linked data: not a priority area?
8. Open Access: what is the current challenge?
9. Partnering in innovation: how important is international collaboration?

To what do you attribute the expected increase in use of the library?

The physical library:

“In the UK there is a strong on-campus student community”

- increased enrollment

“Strategic decision-making in my institution is to grow student population”

- rebirth of the library as a place

“We would not have predicted this. Libraries have reinvented themselves as study centre (...) Stacks and staff are moved to free up space”

“The university library as an attraction: a public space for local community”

What is a technology centre?

- Converged services (IT-Library)? *"That happened some time ago"*
- Spaces for learning/teaching digital skills (GIS, RDM, data tools, robotics, VR, 3D-printers, etc.)?
"We do have sites with integrated services provision, with IT and multi-media support."
"Not a makerspace, but playing and using technology is important in a university setting"
- Synonymous to Digital Humanities Centre?
"We bring expertise and skills together and collaborate with the e-Research centre, Computer Sciences, Geo-spatial data services ..."

Increased use of the library as a social/meeting space: trend?

- No perceived difference between social/work space

“The way students work is social. To facilitate that, we are providing lots of different kinds of space to allow students to find the way that suits them best. The split social/work is too coarse.”

- Balancing between spaces for collaborative work vs reflection

- The many advantages of the library as a space:

“The library is a managed space with responsible adults”

“a home during Christmas for international students”

“a neutral and open space for cross-disciplinary events”

Increased support for research: how do you shift resources?

- The structure of the Research Support Service is nimble, ideally
“We have core teams and distributed subject teams”
- Internal training of staff is essential
“There is a lot of external reskilling available nationally (DPC, DCC, etc.) but the problem is funding and travelling; releasing staff to follow those courses.”
- Identify key expertise outside the library
“We work extremely close with the university research office.”
- Research Support is gravitating into the library, it seems
“Research policy staff and Research computing staff moved into the library.”

Servicing print collections: role of shared print?

- Need for more nuance when speaking about print collections

“I see a decline in lending of our general print collection and rise in borrowing from our high-demand collections and e-materials (reading lists) and use of special collections by researchers is increasing.”
- Differences between types of institutions (deposit libraries, post-92 institutions, Humanities libraries, etc.) lead to different print collection strategies.
- Nevertheless, shared print is clearly important to all of them:
 - UKRR: for monographs still a lot needs to be done;
 - Interested in national shared print and/or regional.

Special collections: not a priority area?

- Unanimous disagreement
“special collections are more on the table than ever” (e.g. RLUK)
“still a huge priority”
- Commitment to make special collections more easily available digitally
“We put a lot of emphasis on it and usage grows as part of Digital Humanities, Digital Science and Born-Digital. We are sharing special collections digitally and support how scholars use digitized collections.”

Linked data: not a priority area?

- Unanimous agreement

“we are interested, but” ... “it is not a high priority area” ... “not at a strategic level”

Open Access: what is the current challenge?

- Complex and costly in the UK

“OA is a major issue, in the near future also, expensive to engage with. We need solutions to make it more cost-effective to deal with. It is highly complex.”
- Discovery as part of the conversation of “WHY OA?”

“OA as a stick works, but what is the carrot?”

“Moving from compliance to benefit”
- The cancelling subscriptions argument

“We are also interested in discoverability and to be able to cancel subscriptions.”

Partnering in innovation: how important is international collaboration?

- UK-centric
 - UK research libraries see themselves as inward looking and will collaborate with the usual suspects.
 - It is difficult for them to collaborate outside the library sector, unless they are partnering on something that is lead by the parent institution.
- Brexit-talks

“What is our global positioning in the future? Which issues can benefit from global scale? These are changing times.”

A RESEARCH AND LEARNING AGENDA FOR SPECIAL COLLECTIONS AND ARCHIVES

Archives & Special Collections

- A growing priority for Research Libraries
 - “The Link to Content in 21st Century Libraries,” J. Lippincott
https://er.educause.edu/articles/2018/1/the-link-to-content-in-21st-century-libraries?utm_source=Informz&utm_medium=Email&utm_campaign=ER#_zs6iKGf1_zlwFoW4
- With the growth of shared print, increased attention to what is unique
- Positioning work for teaching, organizing for digitization, building an open collection

OCLC Research

Community Conversation

- Chela Weber, Practitioner Researcher in Residence
- Literature review
- Active advisory group
- Iterative community conversations
- Open document review
- Publication to frame future work and dialogue

Types of Work

- **In-depth Research**

- helps establish or define current status, or illuminate an ill-defined area of need, such as surveys or other intensive data gathering activities, with analysis and synthesis of that data

- **Community Exploration**

- convening to examine specific issues, facilitating an ongoing discussion group to connect practitioners around evolving area of work, or gathering case studies that can point to shared issues or best practices

- **Practical Advice**

- practical guidance for on-the-ground practice, highlighting current projects that employ smart tactics

Themes

- Structural and Organizational Positioning
- Equity, Diversity, Inclusion, and Accessibility
- Appraisal
- Access to Collections
- Data and Systems

Areas of Investigation

- Convergence of Special Collections and the Research Library
- Advocating for Archives and Special Collections
- Next Steps for Born Digital
- Access Needs
- Evolving Systems Environments
- Stewardship and Collection Development
- Engaging the Challenge of Diversifying Collections

Next Steps for Born Digital

- Born-digital archival collections have grown exponentially since the Taking Our Pulse survey, 2009.
- Focus on activities that come before and after the capture process, from appraisal and donor relations to reading room access

Frameworks for Digital Responsibility

- consider what skills and roles might be needed to operationalize shared responsibility
- create networks and support systems for positions expected to be change-agents
- ongoing leadership support is required to effect programmatic change
- where RDM and Digital Archives meet
- research by Ixchel Faniel: <http://hangingtogether.org/?p=5375>

A proposed activity

Convene a small working group to design a “**greenfield**” **organizational framework** for supporting **born-digital collections across the research library**, considering issues such as labor distribution and the types of **skills and knowledge** needed in different roles, how special collections would **interoperate** with the rest of the research library, and how this might play out in small, medium, and large institutions. Identify change management considerations for enabling such a shift.

Continuing this conversation

- Used for strategic planning
- Organizing meetings and convenings
- Conversations with funders
- Staff orientation
